

1 page full of items (명함, 액자 등등)  
in a big suitcase that opens up when page  
loads

decos are static;  
objects are moving on idle state,  
and animates to become a zoomed  
in state

Self Note:  
this whole page  
may take a long  
time to finish;

If possible, just  
get the suitcase  
and zoom in  
animation of a  
single sheet of  
paper done first.

Can expand  
later once I have  
experience & get  
more assets.

Each page can contain different category of  
info; flip page animation to show next
